

MEMORANDUM

To: Groundwater Management Area # 2 Member Districts

From: Jason Coleman, GMA # 2 Administrative Officer

Date: April 1, 2026

Subject: 90-Day Public Comment Period on Proposed DFCs

The following proposed desired future conditions were adopted by the member districts at the March 25, 2026, meeting:

- **A GMA 2-wide average drawdown of 23 feet between 2020 and 2080 for the Ogallala and Edwards-Trinity (High Plains) Aquifers.**
- **A GMA 2-wide average drawdown of 22 feet between 2020 and 2080 for the Dockum Aquifer.**

This action triggers a minimum 90-day public comment period (April 1-June 29, 2026). Each district must have a public hearing to receive comments about the proposed DFCs during this time. It may be held in conjunction with a regularly scheduled Board of Directors meeting.

During the public comment period, each district shall have the proposed desired future conditions and supporting material available to the public. These documents are available at gma2.org

A summary of comments received should be sent to me following your hearing. If no public comments were received, then this needs to be noted as well. All comments will be combined into a summary document for review at a future GMA#2 meeting.
